19 hundred thirty-one degrees Fahrenheit (131° F) for  
20 seventy-two (72) consecutive hours to destroy

8 health and safety of the natural organic reduction facility  
9 personnel. The room where human remains are prepared for natural  
10 organic reduction shall be private and shall not have a general  
11 passageway through it. All windows or other openings to the outside  
12 shall be treated in a manner that prevents viewing into the room  
13 where the deceased will be prepared for natural organic reduction.  
14 A window for authorized family members of the deceased or such  
15 family member or deceased person's designees shall not constitute a  
16 violation of this section. The location where human remains are

13 prevent odors from entering other parts of the building.

14          J.    All licensed natural organic reduction facilities shall  
15 develop, implement, and maintain an identification procedure whereby  
16 dead human bodies can be identified from the time the natural  
17 organic reduction facility accepts delivery of the body until the  
18 reduced remains are released to an authorized party. After  
19 reduction, an identifying disk, tab, or other permanent label shall  
20 be placed within the reduced remains container or containers before  
21 the remains are released from the natural organic reduction  
22 facility. Each identification disk, tab, or label shall have a  
23 number that shall be recorded on all paperwork regarding the  
24 decedent. This procedure shall be designed to reasonably ensure

1 that the proper body is reduced and that the remains are returned to

4 required reprocessing to meet such limits, and after  
5 eighty material samples of the reduced remains are  
6 found to meet the limits set forth in paragraph 3 of  
7 this subsection, the reduction facility shall analyze  
8 one randomly chosen instance of reduced remains each  
9 month to ensure such remains meet the limits set forth  
10 in paragraph 3 of this subsection. If fecal coliform  
11 or salmonella in the tested reduced remains exceeds  
12 the limit for that substance, the reduction facility  
13 shall analyze subsequent instance of reduced remains  
14 for fecal coliform and salmonella until ten total  
15 material samples are found to meet such limits upon  
16 initial testing, demonstrating the reduction process
